Solar panels for home use wholesale

Frequently Asked Questions

What types of solar panels are available?

Our wholesale solar panels are available in 2kw, 4kw, 10kw, 25kw and 50kw grid tie solar panel bundles...making them perfect for one large, or several smaller grid tie solar system installations. For all wholesale pricing offers, please contact us updated pricing and freight quotations.

Where to buy wholesale solar panels?

If you are looking for a place to buy wholesale solar panels, you've found it. A1 SolarStore offers PV modules from all over the world for competitive prices and with fast delivery. Let us tell you a little about the panels that we offer, how we deliver them and what kind of solar panel you might need.

Do wholesale solar panels come on pallets?

Our wholesale solar panels come on pallets, offering you the perfect wholesale solar panel solution for larger projects or resellers. Whether you're outfitting a commercial property or stocking up for a residential install, these pallets of solar panels provide high-quality performance at unbeatable prices.

What are the cheapest solar panels?

Notice that at A1SolarSolar when it comes to the wholesale price of a solar panel, we show the cost per watt rather than per pallet or per panel. Generally, solar market prices can be described like this: Asian panels, especially Chinese ones, are the cheapest ones. The most popular brands here are JA, LONGI, Trina Solar, ZNShine and many others.

Which high power solar panels should you buy?

When it comes to commercial and industrial systems, customers tend to go for wholesale high power solar panels. 500 watt panels or even more powerful ones is a common thing in large solar projects and solar farms.

What are the best solar panels for home installations?

There are also a few brands that offer premium-class PV modules for home installations. These include Panasonic Eco Solutions, LG, SunPower, REC, Solaria and a few others. Generally, it doesn't make much sense to build commercial systems out of them — they are too classy and expensive for that.

solarwholesale

Solar panels can last anywhere between 25 to 30 years, sometimes more. This doesn't mean that the panels on your roof will stop producing electricity after a couple of decades. It just means their energy production will decrease by what solar panel manufacturers consider optimal to meet the average household's energy needs.

A Guide to DIY Solar Panel Kits for Your Home

A DIY solar panel kit functions by capturing sunlight using photovoltaic (PV) solar panels and converting it into direct current (DC) electricity. This electricity is then converted into usable alternating current (AC) power through inverters. The electricity generated can power your home's lights, appliances, electronics, and more. These kits provide the majority of key components
